Key Findings

Smart Device Usage Trends

01

991 min/day

High Sedentary Behavior

51.5% of users are sedentary or lightly active, averaging 991 minutes of inactivity daily

02

21 min/day

Low Active Minutes

Users average only 21 very active minutes per day vs 991 sedentary minutes

03

Positive trend

Steps Drive Calories

Clear positive relationship — more steps taken directly results in more calories burned

04

6,933 steps

Weekend Inactivity

Sunday has the lowest average steps (6,933) — significantly below weekday averages

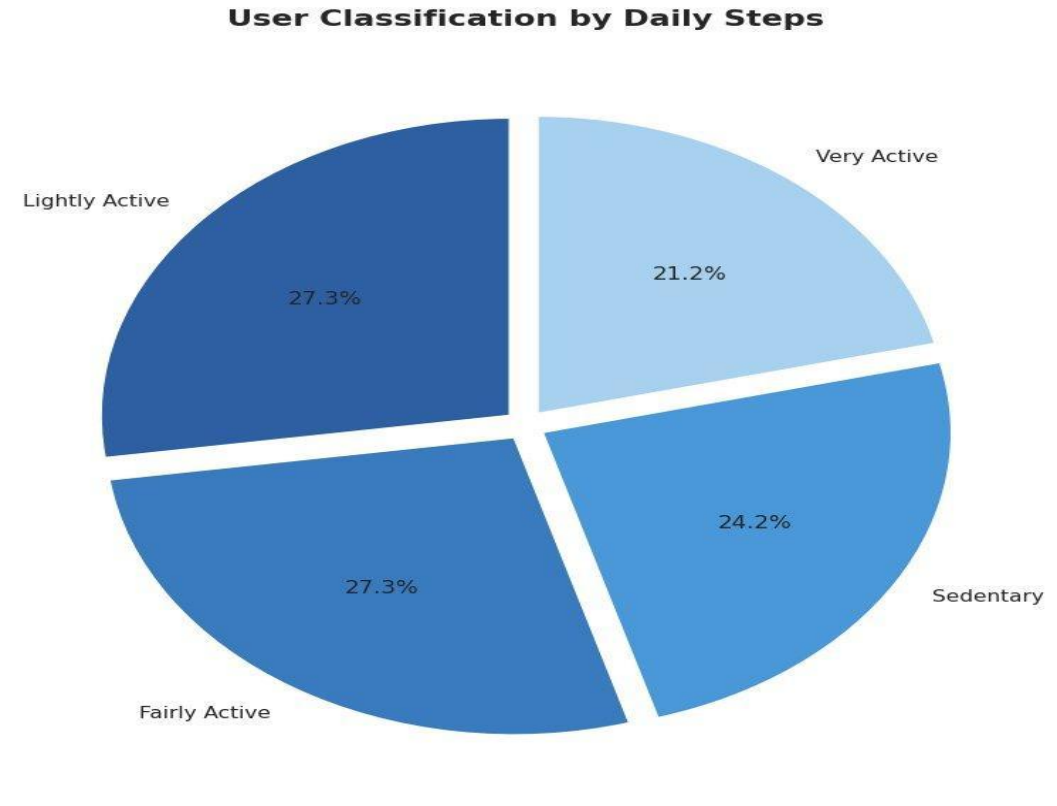
05

Negative trend

Activity vs Sleep

More active users tend to sleep slightly less, showing an activity-sleep tradeoff

Finding 1 — User Classification by Daily Steps



27.3%
Lightly Active

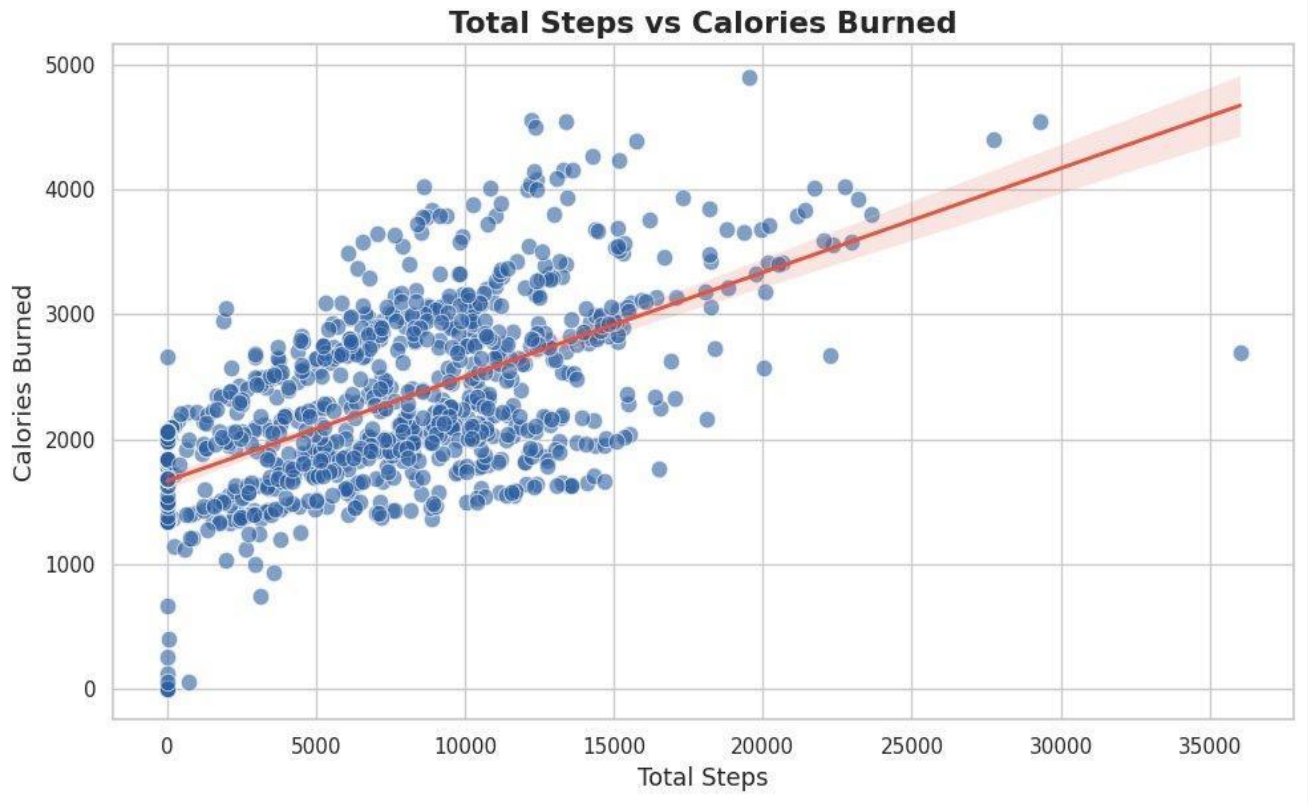
27.3%
Fairly Active

24.2%
Sedentary

21.2%
Very Active

51.5% of users are Sedentary or Lightly Active — not reaching healthy activity levels

Finding 2 — Total Steps vs Calories Burned



Key Insight

More steps = more calories burned

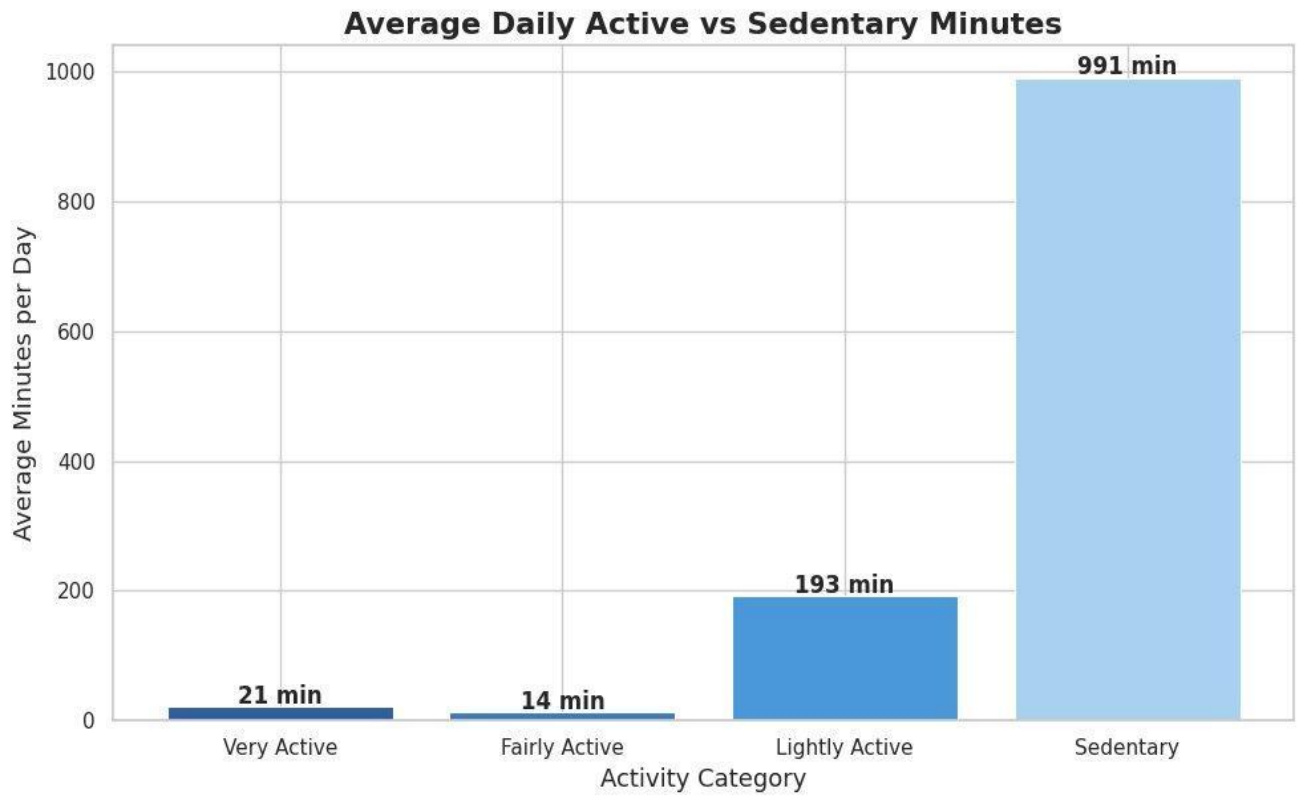
What This Means

Daily movement directly impacts calorie burn

Women tracking fitness goals need to understand that consistent steps — not just intense workouts — drive results

Leaf can reinforce this by tracking every step

Finding 3 — Average Daily Active vs Sedentary Minutes



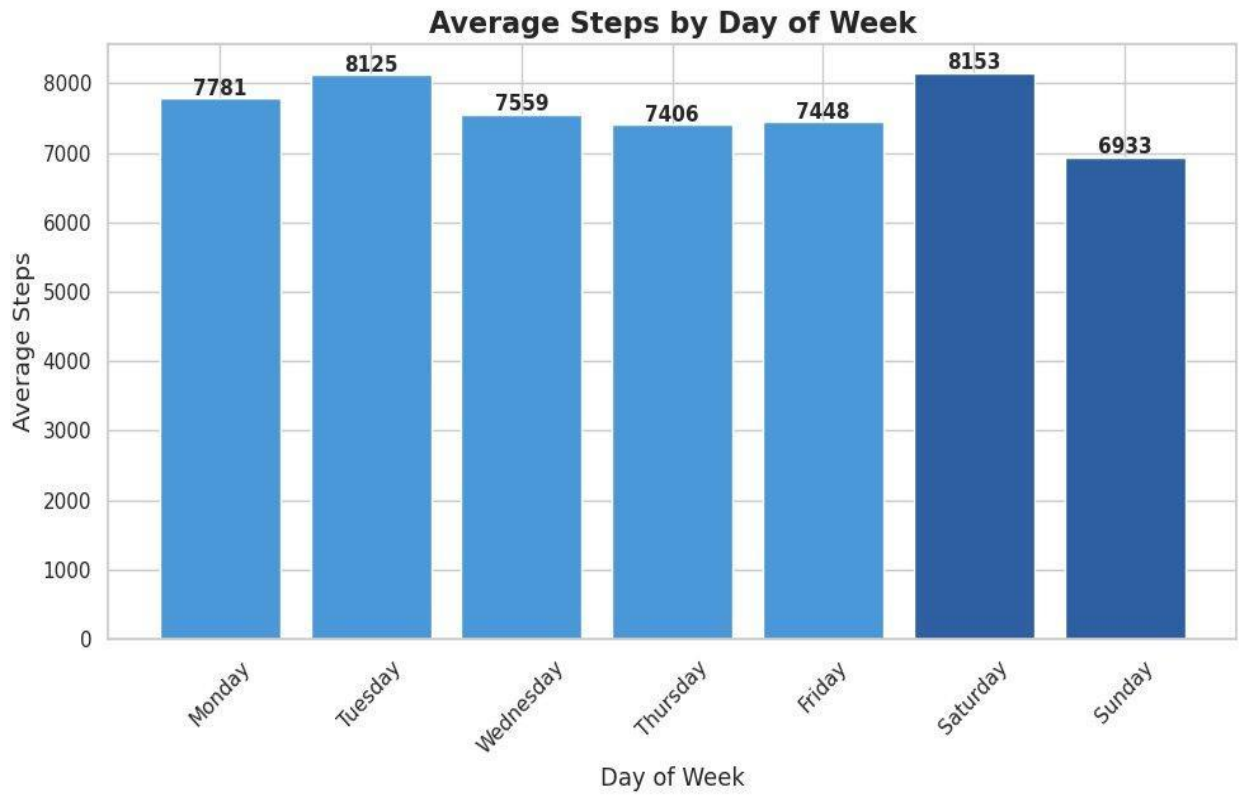
21 min
Very Active

14 min
Fairly Active

193 min
Lightly Active

991 min
Sedentary

Finding 4 — Average Steps by Day of Week



Peak Day

Saturday — 8,153 steps

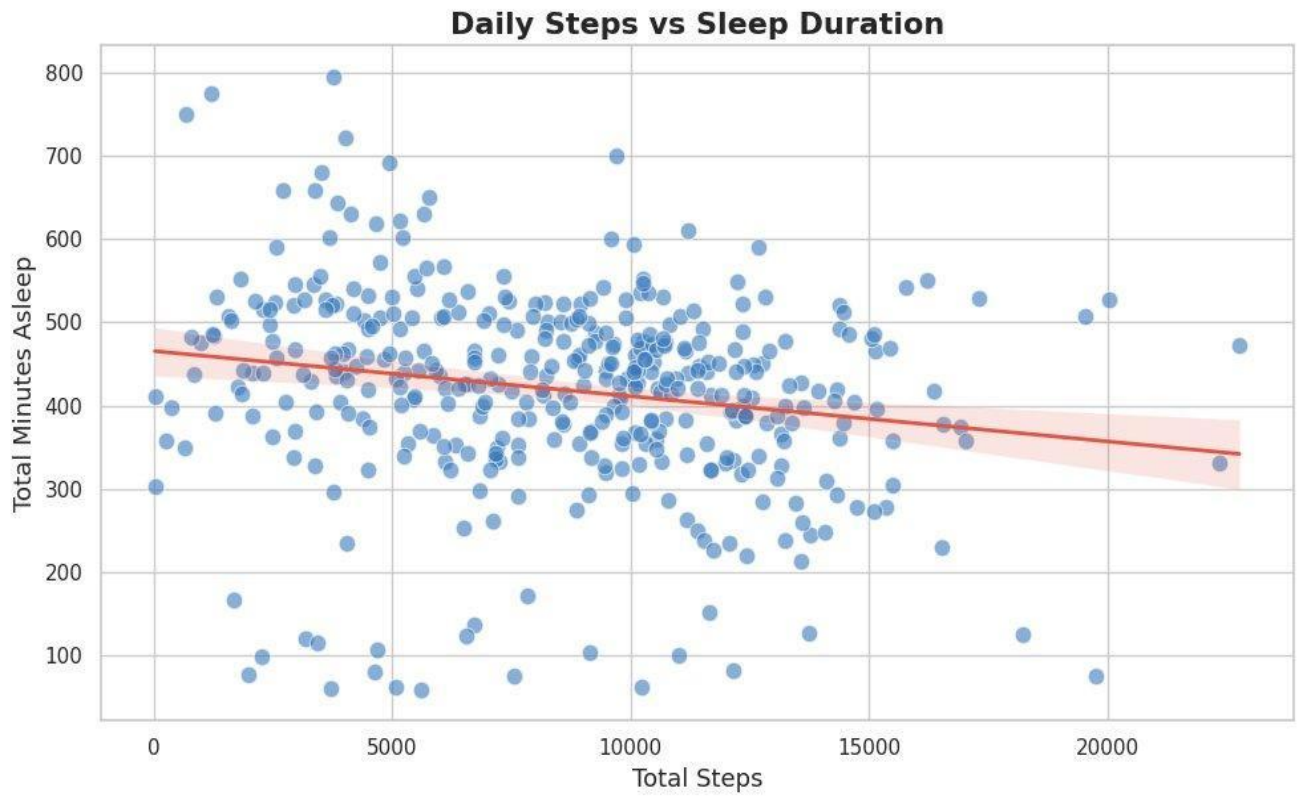
Lowest Day

Sunday — 6,933 steps

Implication

Users lose motivation on Sundays. Targeted wellness nudges on rest days can re-engage Leaf users.

Finding 5 — Daily Steps vs Sleep Duration



Key Insight

More active = slightly less sleep

What This Means

Highly active women may be sacrificing sleep quality without realizing it. Bellabeat Leaf tracks both — making it uniquely positioned to help women balance activity and rest for whole-body wellness.

Top 3 Marketing Recommendations

Bellabeat Leaf

01

Position Leaf as a Sedentary Lifestyle Solution

Insight: 51.5% of users are sedentary or lightly active with 991 min/day inactive

Market Leaf as a daily movement companion — not just a fitness tracker. Target working women who sit all day via Google Search and Instagram with messaging around small, achievable movement goals.

Google Search · Instagram

02

Launch a Weekend Wellness Campaign

Insight: Sunday is the least active day with only 6,933 average steps

Create a Weekend Wellness Challenge through the Bellabeat app. Push Sunday morning notifications to re-engage Leaf users and run weekend-specific ads on Facebook and Instagram.

Facebook · Instagram · App

03

Promote Leaf as a Sleep & Activity Balance Tool

Insight: More active users tend to sleep slightly less — showing an activity-sleep tradeoff

Market Leaf's sleep tracking alongside activity tracking. Position Bellabeat as the brand for whole-body wellness — not just fitness. Use YouTube video ads showing the connection between movement, rest, and health.

YouTube · Bellabeat App

CONCLUSION

Key Takeaways

- 51.5% of smart device users are sedentary or lightly active — a huge opportunity for Bellabeat Leaf
- Users average only 21 active minutes vs 991 sedentary minutes per day
- Sunday is the weakest day for activity — a key moment for Bellabeat to engage users
- Active users risk sacrificing sleep — Leaf's dual tracking is a unique differentiator

"Move well. Sleep well. Live well — with Bellabeat Leaf"
